Coyotes are common throughout North America, including in urban areas. You may see and hear them more during mating season (Dec-Feb) and when juveniles are dispersing from family groups (Sept-Nov). These facts and safety tips will help increase comfort and decrease conflicts when living or recreating near America’s native “Song Dog”.

**Facts**

- Coyotes are members of the dog family; they are curious, adaptable, and learn quickly.
- Coyotes often mate for life, are devoted parents, and are highly communicative (barks, yips, howls).
- Coyotes weigh 18-35 pounds in the West and 30-60 pounds in the East.
- Coyotes may be more protective of dens/territories during pup rearing (April-Aug).
- Coyotes eat large numbers of rodents and rabbits, as well as fruit, vegetation, insects and carrion. They help keep ecosystems vital, healthy and clean.
- Coyotes are naturally wary of people but can habituate to our presence and the reliable food sources that we provide.

**Safety**

- DON’T FEED COYOTES. Their life and your safety depend on coyotes remaining wild and naturally wary of people.
- Remove attractants; pick up trash, secure garbage, and feed pets inside. Don’t leave food or pets outside at night.
- Walk dogs on leashes, especially during pup rearing season (April-Aug). Pick up your small dog if you see a coyote and don’t let pets roam.
- If approached, don’t run. Wave arms, make noise and walk toward the coyote until he retreats. Be “Big, Bad and Loud.”
- Avoid areas where coyotes may be denning or feeding/hiding pups.
- Appreciate coyotes from a distance. Share this information with family and friends.
